

SNOWSHOE LAKE
T7 R7, Penobscot Co.
U.S.G.S. Shin Pond, Me.
Seboeis Grand Lake, Me.

Fishes

Salmon	Minnows (Cont'd)
Smallmouth bass	Golden shiner
Yellow perch	Blacknose dace
Chain pickerel	Fallfish (chub)
Lake whitefish	Banded killifish
White sucker	Redbreast sunfish
Minnows	
Common shiner	

Physical Characteristics

Area - 638 acres	Temperatures
	Surface - 72° F.
Maximum depth - 44 feet	44 feet - 49° F.

Principal Fishery: Salmon, smallmouth bass, yellow perch,
chain pickerel

Snowshoe Lake is ideal habitat for warmwater gamefish. A small deep basin contains some potential coldwater species habitat but the majority of the lake is shallow and warm.

The Seboeis Grand Lake-Snowshoe Lake thorofare and the outlet of Snowshoe provide good salmon spawning and nursery facilities. However, the salmon fishery is limited by heavy predation.

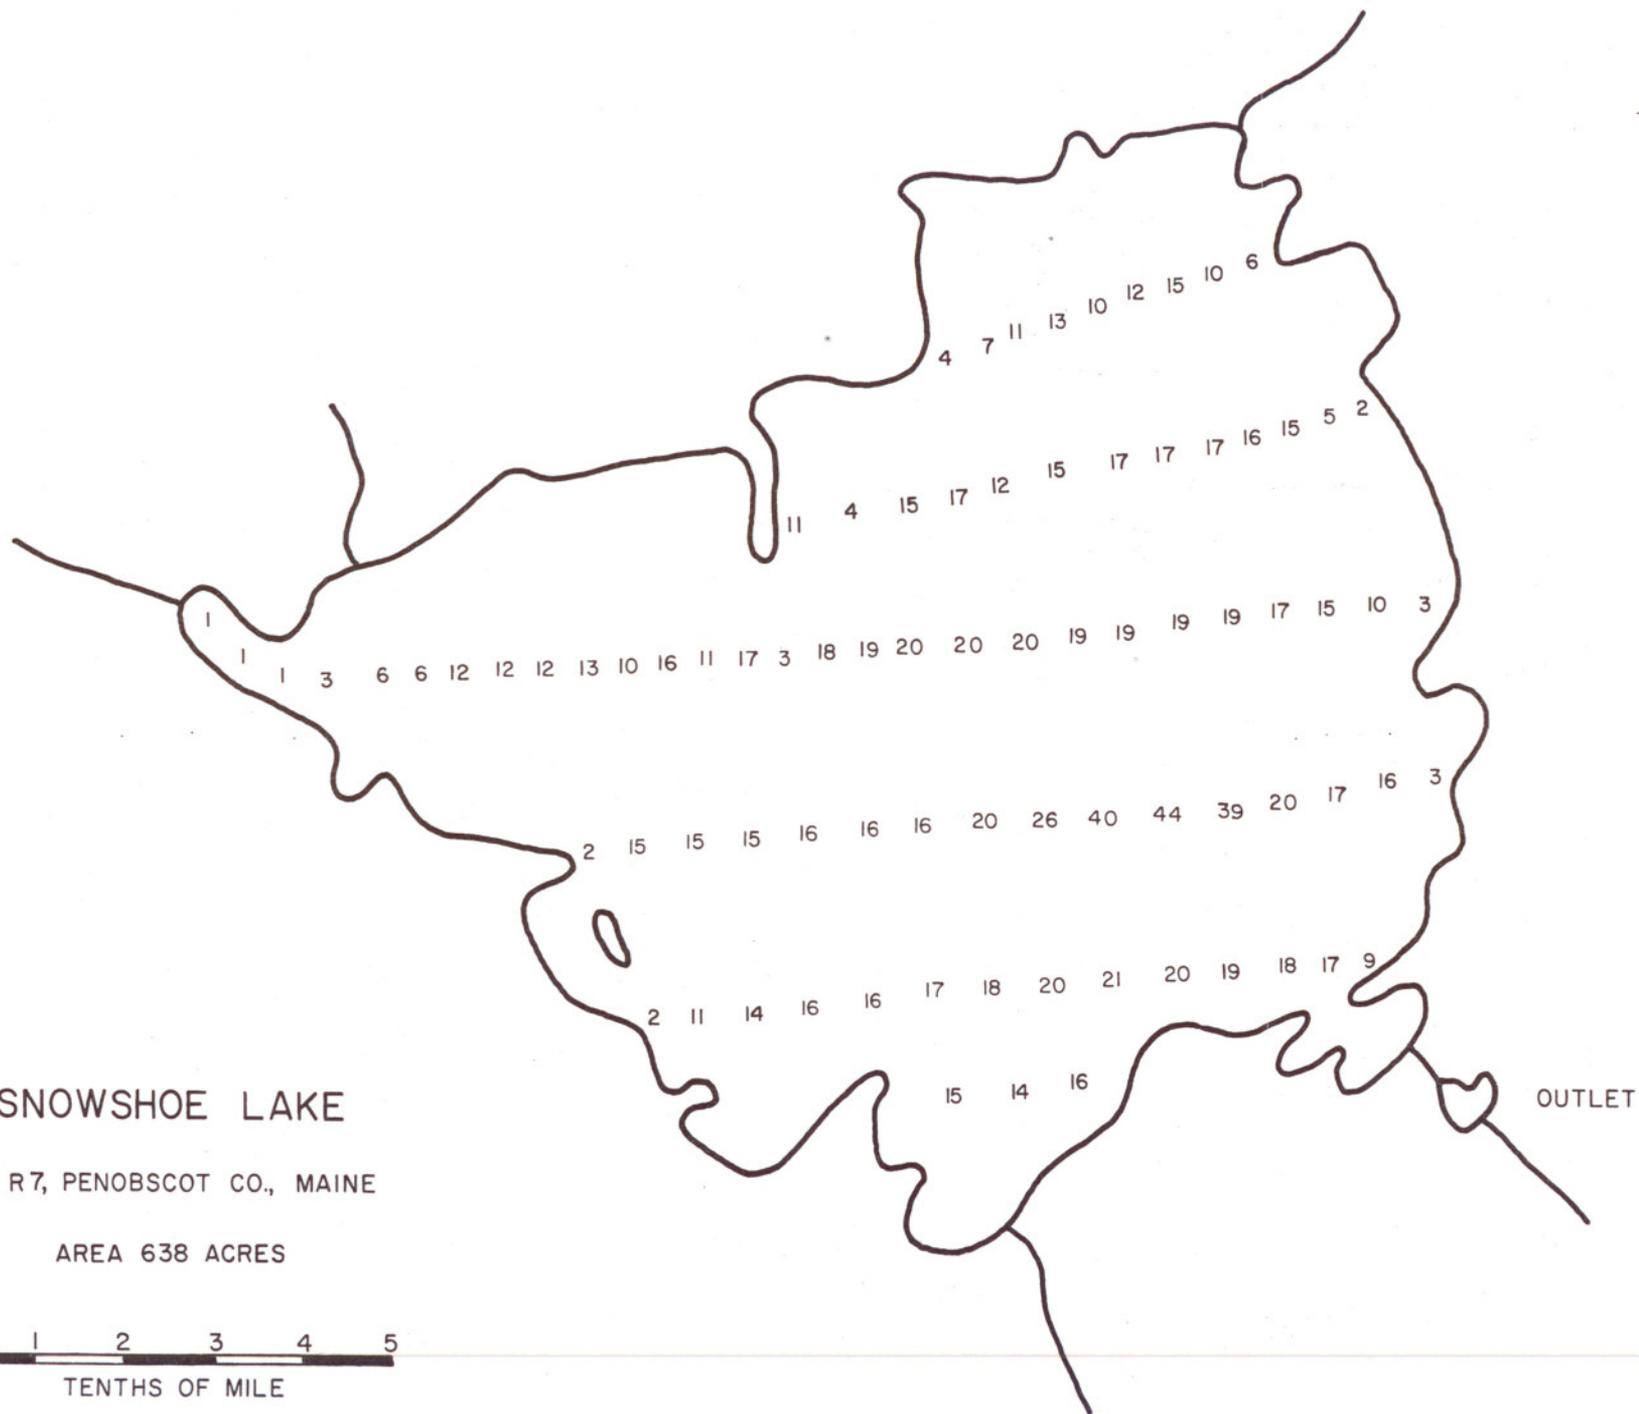

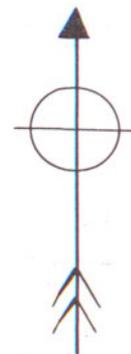

A well established pickerel population provides the principal fishery. Smallmouth bass have become established following an introduction of adults into connecting Sebois Lake.

Access to Snowshoe Lake is via a 10 mile gravel road from the Shin Pond-Matagamom road. Boat launching is possible at the lake.

Management will be for the existing pickerel, smallmouth bass, and salmon. Snowshoe Lake should remain open to ice fishing under existing regulations.

Surveyed - August, 1956
(Revised, 1969)
